

Newsletter Spain – May 2026

Compared to previous years, Spanish winegrowers are currently more relaxed; the risk of night frosts has passed, and the damp weather has allowed for normal vine development. The grapes are neither ripening prematurely nor late. Although all European operators are cautious in their harvest volume forecasts due to the disastrous summers of recent years (which significantly reduced expected volumes), all indicators currently point to a good harvest in 2026.

Prices have generally fallen, especially for white wine. Rosé wine remains difficult to obtain. Red wine prices, on the other hand, have remained stable. We have observed a resumption of negotiations and the conclusion of new contracts. Shipments under existing contracts are proceeding at a normal pace, despite an initial slowdown due to the US-Iran conflict and increased fuel costs. Although the usual business bustle of the start of the season is no longer present, the resumption of activities brings a sense of calm to the various parties involved. A large number of producers have only small quantities available for sale, meaning less than 10% of their production, and therefore they are in no hurry to sell in order to meet future demand until the next harvest is available. However, there are still few cooperatives that have played for time and waited to release their wines. These producers now have to sell their wines at lower prices than at the beginning of the campaign. Now is the right time to specify your requirements, as these producers are open to inquiries. This is especially true for white wines. Furthermore, it is very likely that we will only be able to offer small stocks of the previous harvest at the beginning of the next harvest, primarily due to the small quantity of the 2025 vintage. Therefore, it should be understood that there is no strong pressure in Spain to ask for a crisis distillation.

For the next crop 2026 in Spain ...
